

THREAT INTELLIGENCE REPORT

Telegram Bot Analyzer

Ref. PD-TI-2026-24856 Published 10 July 2026 Source phishdestroy.io/telegram-bot-analyzer

Deep-inspect any Telegram bot token — identity, webhook, messages, observed users

OSINT Tool

Security Research Tool

Anti-Phishing & OSINT Intelligence

This tool extracts intelligence from Telegram bot tokens including **message history, user identities, stolen credentials, crypto wallets** and other artifacts used in phishing & scam operations.

What we do: API calls are proxied to protect your IP. Tokens are AES-encrypted at rest and **permanently wiped** after processing. Results are stored in encrypted archives with auto-expiring download links.

What we don't do: We never store plaintext tokens, never share data with third parties, and never access accounts beyond the bot token scope.

⚠ Legal Notice: By using this tool you confirm that:

I am using this tool **solely for anti-phishing research, threat intelligence, or testing my own bot** I understand that **unauthorized access to third-party accounts is illegal** and I accept full responsibility for my usage I agree to the [Terms of Service](#) and [Privacy Policy](#)

Your session is encrypted • No account required • IP never logged

Authorized security research only. You must own the bot or have explicit written authorization from its operator. Every action is logged. Unauthorized use may violate Telegram ToS and local law.

Confirm responsible use

You are about to download data extracted from **a bot**. By proceeding, you confirm:

- You have **legal authorization** to possess this data.
- You will **store it securely** and delete it when no longer needed.
- You **will not redistribute** personal data unless legally required.
- You understand **unauthorized use violates Telegram ToS and may be a criminal offence** in your jurisdiction.

I acknowledge the above and accept full responsibility.
